

STOP SCAFFOLDING START CODING

A half-day tutorial on
developing domain-driven apps
with Apache Isis

DOMAIN DRIVEN DESIGN

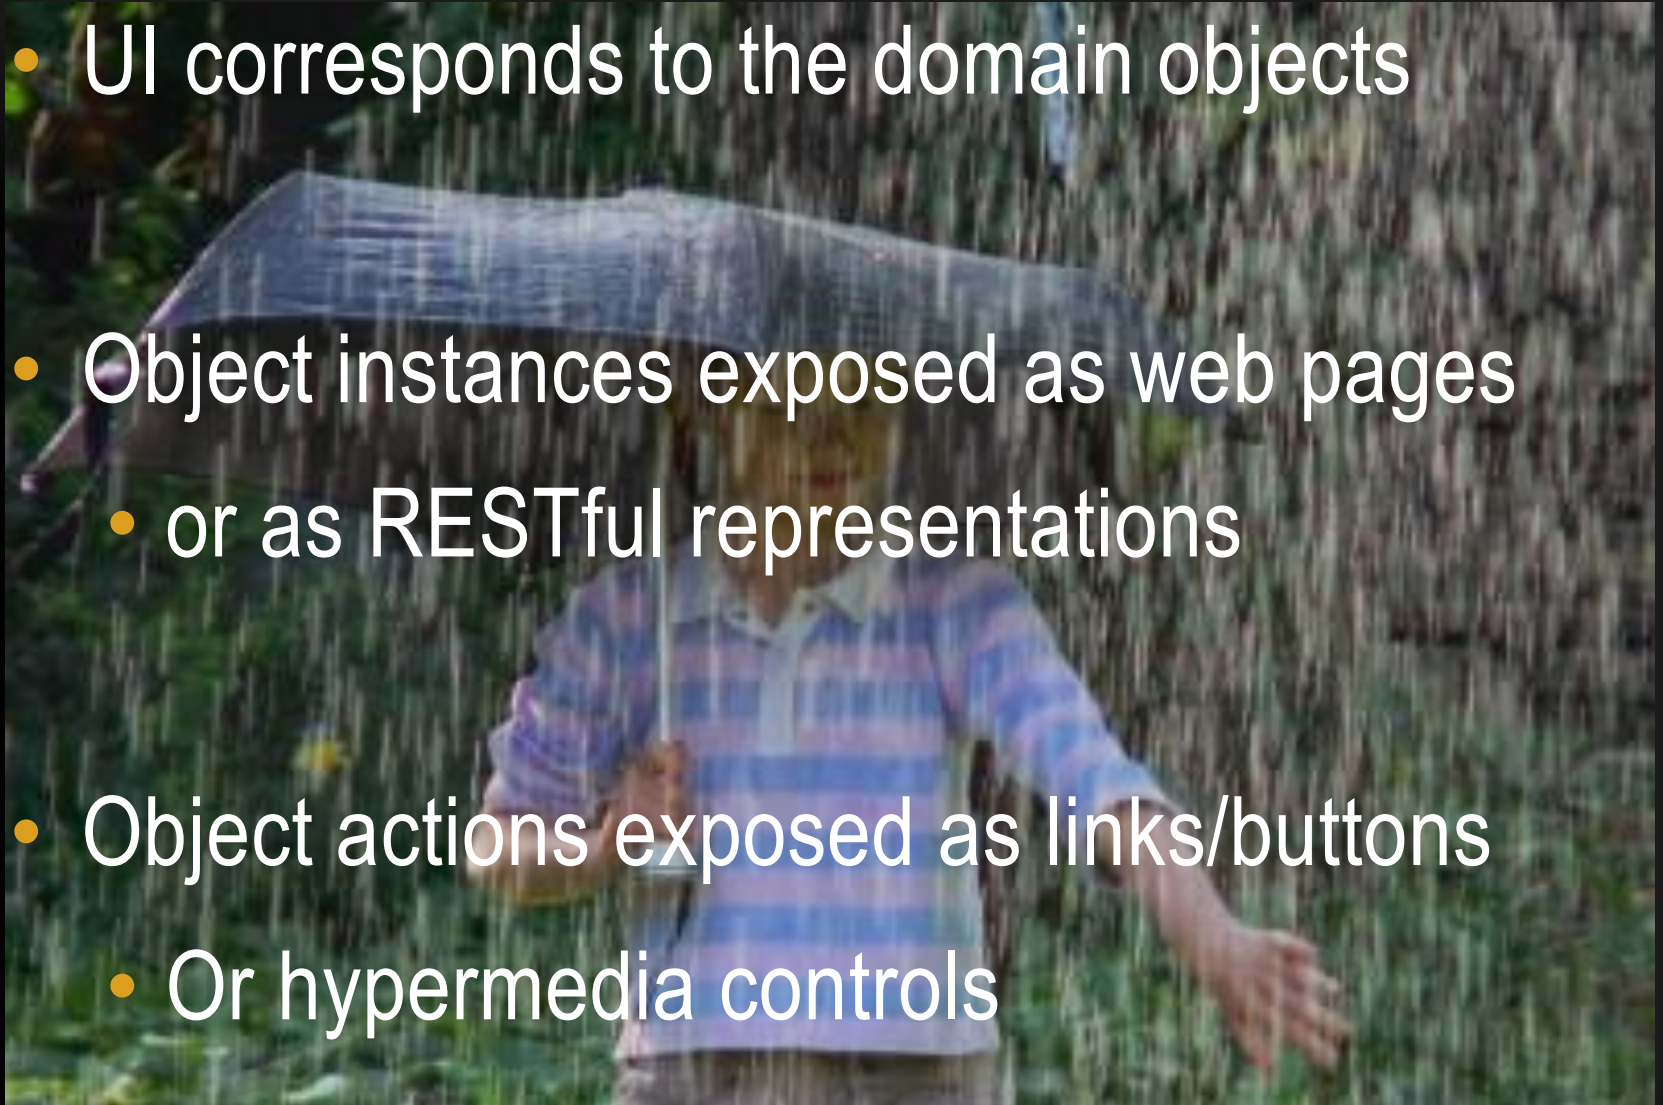

- Ubiquitous Language
 - With a conscious effort by the team, the domain model can provide the backbone for that common language
- 
- A close-up photograph of two hands clasped together, one wearing a ring, set against a dark background. The hands are positioned in the center-right of the frame, with the fingers interlaced. The lighting is warm and focused on the hands, creating a sense of connection and agreement. The background is dark and out of focus, emphasizing the hands as the central subject.

NAKED OBJECTS

- An architectural pattern
 - A principle
 - “Problem solver, not process follower”
- 

DON'T REPEAT YOURSELF

- UI corresponds to the domain objects
- Object instances exposed as web pages
 - or as RESTful representations
- Object actions exposed as links/buttons
 - Or hypermedia controls

```
mvn archetype:generate \
  -D archetypeGroupId=org.apache.isis.archetype \
  -D archetypeArtifactId=simpleapp-archetype \
  -D archetypeVersion=1.8.0-SNAPSHOT \
  -D groupId=com.mycompany \
  -D artifactId=myapp \
  -D version=1.0-SNAPSHOT \
  -D archetypeRepository=\
    http://repository-estatio.forge.cloudbees.com/snapshot/ \
  -B
```
