

ASC 2021

API SPECIFICATIONS CONFERENCE

September 28-29, 2021 | Virtual Experience

2021 SPONSORSHIP PROSPECTUS

About the Event

The API Specifications Conference (ASC) is a place for API practitioners to come together and discuss the evolution of API technology.

ASC includes cutting edge technology keynotes and sessions that chart the future of APIs, in-depth specification and standards discussions. The event is designed to be highly interactive with plenty of discussion time throughout the workshops and sessions.

OpenAPI Specifications, RAML, Blueprint, gRPC, OData, JSON Schema, GraphQL, AsyncAPI and other formats will all be topics at the event, enabling attendees to get familiar with these formats and discuss how to use them in practice.

The event has its origins in the API Strategy and Practice Conference (APIStrat) which ran for many

years and became part of the OpenAPI Initiative in 2016. The collaborative spirit and community from APIStrat continue through the ASC event and we look forward to many of the same lively conversations and debates!

API practitioners including API developers, API Operations teams, API Designers and Enterprise Architects will attend ASC 2021. Content at the event will range from beginner introductions to API specifications all the way through best practice and cutting edge specialist topics.
