

SODACODE 2022

The Data and Storage Hackathon

Project Guide

Introduction

Coding in open source projects is a great opportunity for a developer to become more proficient. SODACODE 2022 is the first coding event by SODA Foundation for beginners and professionals.

From minor bug fixing to complex issues, and new feature development for SODA Projects, you will get to connect, network, and increase your visibility through working with experts in the industry. We have projects in multiple programming languages.

Take your open source contributions to the next level or make your first contribution to open source! Submit Pull Requests (PR) or raise issues on GitHub. Enrich your open source portfolio through SODA Projects.

What more, you can win amazing prizes worth **USD6000+**, **contribution badges and certifications**. Selected participants will get a **chance to share their experience and showcase their code** in our final gala event of SODACODE 2022 with a large open source community of members and experts across the world.

Please find more details about SODACODE here:

How to join

If you want to join the SODACODE 2022, please fill out the project joining form and submit. We will review and confirm your participation and the next steps.

[Project joining form here](#) 

It's free to join. However, if you want to sponsor and increase your project branding, please check out the SODACODE sponsorship at the [SODACODE event page](#)

Requirements for Participating Projects

Once the project joining is confirmed, the project needs to provide project specific support for SODACODE 2022 and follow the guidelines.

High level expectations are given below. We will provide a detailed guide, templates and tools once the project joining is finalized.

- Project to provide the SODACODE 2022 interface team (1-3 members per project)
- Need to create specific issues or contribution tasks in your project GitHub (or respective repository)
- All issues need to be added with specific labels for the event, priority, type of tasks etc. We will provide all the needed details on the labels needed
- Project maintainers need to review the contributions from the SODACODE 2022 participants
- Project interface team to provide the final contribution ranking for the respective projects
- Project needs to be open source with compatible license for public contributions
- Private repositories under open source projects are **not** allowed
- All the issues or tasks to be completely open / public

SODACODE 2022 organizing team will arrange:

- ✓ Detailed Project Guide: Will have all the guidelines and label requirements
- ✓ Project Orientations
- ✓ Tools and Templates as needed
